It's important for children to know their colors before they start kindergarten. Teaching colors to young children can be part of their everyday life!

Think about all the colors you see while out and about: vehicles, landscape, signs, buildings!

By making your child aware of the colors around them, they begin to build color recognition skills.

You can discuss colors while reading books, and play simple sorting color games.

It's important for children to know their colors before they start kindergarten. Teaching colors to young children can be part of their everyday life!
